Solution Architecture

Date	09 september 2022
Team ID	PNT2022TMID22562
Project Name	Project – Containment Zone Alert Application

Solution Architecture :

Solution Architecture is a complex process - with main sub-processes - that bridges and gap between business problems and technology solutions. Its goal are to:

- Find the best technology solution to solve existing business problems.
- Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholder.
- Define features, development phases, and solution requirement.
- Provide specification according to the solution is defined, managed, and delivered
